JIG Berlin Workshop Successes

A record number of participants attended two back-to-back JIG workshops in Berlin last week. Participants from the Inspector and Site Manager communities were given presentations by a variety of speakers covering topics including filtration, field testing, dP monitoring, equipment, product quality, fuel traceability, field tests, filter monitors, ESB testing and more! Many engaging discussions took place, enabling attendees to share their wide knowledge and experience across a variety of fields and specialisms.

In addition, during both workshops, JIG's new 'state-of-the-art' JITS (JIG Inspection Tracking System) was demonstrated, giving attendees the opportunity to practice its use first-hand and for the first time. November JITS training dates are now available. Please contact sam.neal@jigonline.com.

In recognition of sites Inspected to JIG Standards in 2017, Sustained and Improved Performance Awards were presented to a number of locations, demonstrating the success of the IJS programme to-date.

JIG would like to thank all participants and presenters for contributing their time, knowledge and energy to these events.
