JIG Launches New HSSE Posters

JIG has launched the first of its HSSE posters to address common HSSE procedures.

The first poster, relating to the 360 walk around procedure, required by JIG standards to be carried out before leaving the aircraft at the completion of the fuelling, has been added to the JIG website and is available to download or print.

The objective of this poster is a reminder to all refuelling operators of the key steps of the 360 walk around process.

There is a second version of the poster to which text can be added to convey safety messages associated with the 360 walk around procedure in the local language.

The posters are available in the “HSSE Publications” area of the website:

<http://www.jigonline.com/publications/hsse-publication/>

Further posters will follow in the coming months to address additional JIG HSSE procedures or common inspection HSSE findings (eg. use of PPE, 3 points of contact etc), to assist and support operations to reinforce the required procedures.
